

Jordan Badcock

Cloud & AI Engineer

jordanbadcock17@gmail.com · LinkedIn · github.com/jordan-badcock

SUMMARY

Cloud & AI engineer who builds intelligent, cloud-native systems end to end. Sole engineer on multiple production-grade AWS serverless platforms — event-driven pipelines and IAM-automated provisioning — with a machine-learning foundation from a BAIT (AI & ML) degree spanning LLM applications, computer vision, and deep learning. Strong at bridging security and least-privilege design with scalable engineering.

TECHNICAL SKILLS

Cloud & Infrastructure: AWS — Lambda, CDK v2, S3, SES, EventBridge, DynamoDB, ECS/Fargate, Amazon Connect, Lex V2 · Docker · Ansible · GitHub Actions CI/CD · Linux

AI & Machine Learning: PyTorch, TensorFlow, scikit-learn · LLMs (OpenAI, Gemini, Ollama) · Whisper · spaCy · OpenCV · SHAP

Languages: Python, TypeScript, JavaScript, SQL (PostgreSQL), Bash

Web & Backend: React, Node.js, FastAPI, REST APIs

Identity & Security: AWS IAM (least-privilege), OAuth 2.0, JWT, SAML/OIDC, PKI

PROFESSIONAL EXPERIENCE

Software Developer — NOCLand

Aug 2024 – Present

- **Project lead, POP Access Agent:** sole engineer on a serverless IAM platform (AWS CDK, Lex V2, Amazon Connect) automating physical-to-logical access provisioning for [X]+ users across [Y] sites, with fine-grained IAM execution roles and Node.js fulfillment hooks built for SOC 2 / SOX audit readiness.
- Built Python automation against high-volume ITSM workflows (Jira / Znuyn), eliminating repetitive manual triage.
- Optimized corporate Ansible libraries for standardized configuration and security hardening across distributed network environments.

Software Developer (Co-op) — Whitecap Scientific Corporation

May 2021 – Dec 2022

- Designed and built production web application features in an Agile team, using GitHub for version control and CI/CD workflows.
- Engineered features that improved the speed and reliability of online file transfers.
- Supported, maintained, and documented software, rapidly adopting new tools to contribute to the team.
- Maintained and optimized web-app forms, data pipelines, and UI to improve the overall user experience.

TECHNICAL PROJECTS

- **Multi-Tenant Email-to-Ticket Ingestion Engine (AWS):** sole engineer on a reusable AWS-native platform (SES → S3 → Lambda → EventBridge → DynamoDB) designed to ingest and normalize 5,000+ monthly JSON alerts across partner tenants, with cross-tenant isolation via multi-account deployment, Zod schema validation, DynamoDB idempotency, and heartbeat-based silence detection.
- **AI Study Assistant (Capstone):** full-stack LLM platform (React, Node.js, PostgreSQL) turning course material into summaries, flashcards, and quizzes, with API-response caching for performance.
- **Emerging Trends AI Kiosk:** voice-driven kiosk running a fully local LLM pipeline (FastAPI, Ollama, Whisper, TTS) — no cloud dependency.

- **Deep Learning & Computer Vision:** ResNet medical-image classifier with SHAP/LIME explainability; Temporal Fusion Transformer for human-activity recognition (89% across three datasets).

EDUCATION

Bachelor of Applied IT: AI & Machine Learning — College of the North Atlantic	Graduated Jun 2026
Diploma in Software Development (Co-op) — College of the North Atlantic	2020 – 2023
